**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A mismatch modeling tool comprising:

a software implemented transistor mismatch model ("SITMM");

at least one editable mismatch model data library comprising process parameter variables accessed by said SITMM;

a circuit simulation library and program data output accessed by said SITMM; and

a graphical interface to said SITMM, the graphical interface having ~~at least one of:~~ (a) a plurality of string-of-data input parameter fields to provide a plurality of input parameter data strings to the SITMM for generating results for at least one mismatch parameter over the plurality of input parameter data strings, wherein each of the string-of-data input parameter fields accepts a delimited list of values for each geometry, bias, and temperature condition parameter, and (b) a plurality of range-of-data input parameter fields to provide a plurality of input parameter ranges of data to the SITMM for generating results for at least one mismatch parameter over the plurality of input parameter ranges of data, wherein the mismatch modeling tool is configured for utilization via a web interface.

2. (Original) The mismatch modeling tool of Claim 1 wherein said graphical interface comprises a menu driven modeled device selection frame.

Appl. No. 09/654,253

Amendment dated September 15, 2006 filed with RCE

Response to Office Action of May 15, 2006

3. (Original) The mismatch modeling tool of Claim 2 wherein said menu driven modeled device selection frame configures said software implemented transistor mismatch model to display a dynamically generated input data frame within said graphical interface.
4. (Previously Presented) The mismatch modeling tool of Claim 3 wherein said dynamically generated input data frame reflects data input fields of one of a plurality of input scenarios comprising at least one of:
- a voltage driven scenario;
  - a current mirror scenario;
  - a differential pair scenario;
  - a resistor scenario; and
  - a capacitor scenario.
5. (Currently amended) The mismatch modeling tool of Claim 4 wherein said dynamically generated input data frame comprises a plurality of data input columns comprised of at least two of:
- a plurality of single-data input parameter fields;
  - the [[a]] plurality of string-of-data input parameter fields; and
  - the [[a]] plurality of range-of-data input parameter fields.

Appl. No. 09/654,253

Amendment dated September 15, 2006 filed with RCE

Response to Office Action of May 15, 2006

6. (Currently amended) The mismatch modeling tool of Claim 5 further comprising an electronically transmitted ASCII output data file, said ASCII output data file comprising output data reflecting at least one of said at least two of:

said plurality of single-data input parameter fields;

said plurality of string-of-data input parameter fields; and

said plurality of range-of-data input parameter fields.

7. (Original) The mismatch modeling tool of Claim 6 wherein said ASCII output data file is an emailed ASCII output data file.

8. (Original) The mismatch modeling tool of Claim 6 further comprising a three dimensional output plot, said three dimensional output plot being a graphical representation of said output data within said ASCII output data file.

9. (Currently amended) The mismatch modeling tool of Claim 5 further comprising:

when the plurality of data input columns includes the plurality of single-data input parameter fields, a dynamically generated output data frame, said dynamically generated output data frame displaying output data reflecting said plurality of single-data input parameter fields.

Appl. No. 09/654,253

Amendment dated September 15, 2006 filed with RCE

Response to Office Action of May 15, 2006

10. (Currently amended) A mismatch modeling tool comprising:

a software implemented transistor mismatch model ("SITMM");

at least one editable mismatch model data library comprising process parameter variables accessed by said [{"SITMM"}];

a circuit simulation library and program data output accessed by said [{"SITMM"}];  
and

a graphical interface to said SITMM, the graphical interface having ~~at least one field~~ a plurality of fields for receiving sets of mismatch input data for a plurality of mismatch input parameters and providing the sets of mismatch input data to the SITMM to generate mismatch output data based on the sets of mismatch input data,

wherein each of the plurality of fields accepts a delimited list of values for geometry, bias, and temperature condition parameters, and

wherein the mismatch modeling tool is configured for utilization via a web interface.

11. (Canceled)

12. (Currently amended) The mismatch modeling tool of ~~Claim 11~~ Claim 10 wherein said software implemented transistor mismatch model is configurable for a plurality of input scenarios comprising at least one of:

a voltage driven scenario;

a current mirror scenario;

a differential pair scenario;

Appl. No. 09/654,253

Amendment dated September 15, 2006 filed with RCE

Response to Office Action of May 15, 2006

a resistor scenario; and

a capacitor scenario.

13. (Original) The mismatch modeling tool of Claim 12 wherein said graphical interface comprises a dynamically generated input data frame, said dynamically generated input data frame displaying parameters reflecting a selected said input scenario.

14. (Previously Presented) The mismatch modeling tool of Claim 13 wherein said dynamically generated input data frame comprises a plurality of data input columns comprised of at least two of:

a plurality of single-data input parameter fields;

a plurality of string-of-data input parameter fields; and

a plurality of range-of-data input parameter fields.

15. (Currently amended) The mismatch modeling tool of Claim 14 further comprising:

when the plurality of data input columns includes the plurality of single-data input parameter fields, a dynamically generated output data frame, said dynamically generated output data frame displaying output data reflecting said plurality of single-data input parameter fields.

16. (Currently amended) The mismatch modeling tool of Claim 14 further comprising an electronically transmitted ASCII output data file, said ASCII output data file comprising output data reflecting at least one of said at least two of:

Appl. No. 09/654,253

Amendment dated September 15, 2006 filed with RCE

Response to Office Action of May 15, 2006

said plurality of single-data input parameter fields;

said plurality of string-of-data input parameter fields; and

said plurality of range-of-data input parameter fields.

17. (Original) The mismatch modeling tool of Claim 16 further comprising a three dimensional output plot, said three dimensional output plot being a graphical representation of said output data within said ASCII output data file.

18. (Original) The mismatch modeling tool of Claim 13 wherein said dynamically generated input data frame comprises a plurality of data input columns comprised of at least one of:

a plurality of string-of-data input parameter fields; and

a plurality of range-of-data input parameter fields.

19. (Currently amended) The mismatch modeling tool of Claim 18 further comprising an ASCII output data file, said ASCII output data file comprising output data reflecting said at least one of:

said plurality of string-of-data input parameter fields; and

said plurality of range-of-data input parameter fields.

20. (Original) The mismatch modeling tool of Claim 19 further comprising a three dimensional output plot, said three dimensional output plot being a graphical representation of said output data within said ASCII output data file.
